PROFESSIONAL SUMMARY

Full-Stack Engineer who ships complete applications — frontend, backend, and database — solo. Built a production-style SaaS job tracker (Next.js/FastAPI) and an AI compliance-verification platform with LLM-based reasoning, deployed on AWS. Grounded in system design, microservices architecture, and cloud fundamentals (AWS, Azure, GCP) through coursework and certifications. Sole backend developer, HCL Tech Hackathon 2026. Seeking a Full Stack Developer role to build and ship production-grade web and mobile-ready applications.

TECHNICAL SKILLS

Frontend: React, Next.js, React Native, TypeScript, JavaScript, HTML, CSS, Responsive UI Development

Backend & APIs: FastAPI, Flask, Node.js, Express.js, REST APIs, System Design, Microservices Architecture, Async Processing, Pydantic, JWT Authentication, Redis Caching, Postman

Languages: Python, TypeScript, JavaScript, SQL, Java

Databases: MongoDB, MySQL, SQLite, Redis, IndexedDB, SQL Indexing, Query Optimization

Cloud & DevOps: AWS (EC2, S3), Azure, GCP, Kubernetes, Docker, Git, GitHub Actions (CI/CD), Linux, Agile / Scrum

Generative AI / LLMs (Bonus): LangChain, LangGraph, RAG Pipelines, Prompt Engineering, LLM APIs (Claude, Groq Llama 3.3, OpenRouter), Vector Search (FAISS, ChromaDB)

Libraries & Testing: Pandas, NumPy, Scikit-learn, Matplotlib, pytest, Unit Testing, mypy, Ruff

RELEVANT EXPERIENCE

Backend Engineer — Online Banking System *HCL Tech Hackathon 2026 · Sole Backend Developer · 3-Person Cross-Functional Team*

- Delivered a production-grade banking system's core transaction infrastructure as measured by zero data-consistency failures under concurrent load, by designing a modular FastAPI/SQLite architecture with ACID-compliant transaction handling and JWT-based authentication across three user roles.
- Reduced booking and balance-conflict risk to zero as measured by full concurrency-safeguard coverage across customer, admin, and staff roles, by implementing role-based access control fully integrated with the frontend UI.
- Delivered a complete system design under a hackathon deadline as measured by industry-judge evaluation on code quality and production readiness, by following Agile sprint cycles as the sole backend developer on a 3-person team.

PROJECTS

JobPilot — Full-Stack LLM-Powered Job Application Tracker *Next.js · TypeScript · OpenRouter LLM API · IndexedDB · Cheerio*

- Independently designed and shipped a full-stack, local-first SaaS job tracker end-to-end — custom UI design system, Next.js/TypeScript frontend, and an LLM-powered matching engine that automatically scores and ranks job descriptions against a user's resume, keeping **100%** of data client-side via IndexedDB for complete privacy.
- Automated job-listing extraction using Cheerio web scraping with deep-link resolution and duplicate-detection logic, eliminating manual data entry across the application.

ComplianceAI — Production-Ready AI Compliance Verification Platform *Python · FastAPI · LangChain · Playwright · Groq Llama-3.3-70B · Docker · AWS (EC2, S3)*

- Architected an end-to-end platform using FastAPI, Playwright, and LangChain to crawl websites and verify compliance against policy documents, discovering **101 routes** and extracting **695 UI elements** for automated review; deployed on AWS EC2 with S3-backed document storage.
- Engineered a three-gate verification cascade — exact match → semantic embedding similarity → LLM reasoning — resolving **59%** of **426** elements without an LLM call, cutting inference costs by over half while generating JSON/HTML/CSV audit reports.

Hospital Data Pipeline — ETL & Analytics System *Python · FastAPI · SQLite · Redis · ETL · Docker*

- Engineered a 3-stage ETL pipeline (Bronze → Silver → Gold) to process **500+** patient records, reducing data inconsistency by **70%** through automated risk scoring, anomaly detection, and threshold-based alerting.
- Optimized backend query performance by **35%** using SQL JOINS, indexing, and stored procedures within a modular FastAPI backend with Redis caching; containerized with Docker for reproducible deployment.

EDUCATION

Jain College of Engineering | B.E. Computer Science and Engineering | CGPA: 8.39 | 2022–2026

Additional Certifications (7th Semester): System Design, Kubernetes, Microservices Architecture, Azure & GCP Fundamentals, Unit Testing

ACHIEVEMENTS

- HCL Tech Hackathon 2026:** Selected as sole backend developer for a 3-person cross-functional team after clearing technical assessment rounds and structured industry training; project evaluated by industry judges on code quality and system design.
- Srishti 2025:** Shipped a full-stack web application in **48 hours** under extreme time pressure as part of a cross-functional team, demonstrating rapid delivery and agile collaboration.
